

Why quality matters?

The next pages provide statements by these different professionals:

Scientist at a CRO

PhD student

I'd like to avoid false positives or false negatives since I cannot afford wasting limited time allocated to my PhD project.

I need help to find tools and resources to learn how to do good quality research.

I want to be prepared for a successful career in science and need to learn how to navigate avoiding false leads and to focus on what may lead to success.

María Arroyo,
Groningen University

Post Doc

Isabel Seiffert,
Ludwig-Maximilian University

I want to mention EQIPD in my CV to demonstrate that I have worked in a high-quality research unit and that I have advanced knowledge about the research quality. Therefore I'm well prepared for a career as an independent scientist!

I need to apply for my own funding and will use compliance with the EQIPD standards as an additional argument why my research deserves funding.

When starting an independent career, I want to be well prepared to decide what I should have in my environment to secure robust and trustworthy results, how to coach others and do not want to forget anything important!

PI at a university

Every year, I have new students who need to be introduced to the lab work and good research practices. If I have a framework and all useful materials in one place, it will save me a lot of time and effort!

Gernot Riedel, Aberdeen University

With the EQIPD accreditation, funding agencies know that we comply with the most up-to-date quality requirements, and they will have increased trust in our research.

I travel a lot and cannot supervise my lab as much as I probably should. Therefore, it is great to have a system that helps me secure the quality of research that my lab is producing.

We are overloaded with the growing number of rules and regulations. It will save me time and effort to have one system that helps to structure all this information and helps me to prioritize the most urgent and important tasks.

Scientist at a CRO

I have often new colleagues who need to be introduced to the lab work and good research practices. EQIPD provides me the framework and useful materials for this task, which saves me a lot of time and effort!

Excellent research quality is a top value proposition for our company and, with the EQIPD accreditation, our CRO will attract even more customers!

EQIPD helps me to cope with the growing number of rules and regulations in the non-regulated space set by sponsors, funders, competent authorities and customers. It saves me time and effort, as I have one system that overviews everything.

Lab leader at a big pharma

I often have new colleagues who need to be introduced to the lab work and good research practices. EQIPD provides me the framework and useful materials for this task, which saves me a lot of time and effort!

Proper documentation practices are essential not only for regulatory purposes but also for protection of our intellectual property. EQIPD can help me with this!

Although I am supported by quality professionals, I conduct non-regulated drug discovery research and may not be able to work efficiently under GLP conditions. Following the EQIPD approach helps me to achieve the right balance between generating reliable robust data and maintaining flexibility and efficiency needed in basic research.

Lab leader at a biotech

As a small company with limited resources, we have just one shot on goal. We cannot fail just because our data package is or may appear biased due to deficiencies in study design or documentation.

Our small team cannot easily track the growing number of rules and regulations set by sponsors, funders, competent authorities and collaborator partners. EQIPD saves me time and effort, as I have one system that overviews everything.

Strategic vision for our company is a partnership with a major pharma company. Everyone in our small team shares the responsibility of generating a data package of quality conform to the expectations of our future partners.

Sylvie Ramboz, Psychogenics

Quality professional

I regularly have to provide training or to answer questions related to Good Research Practice and EQIPD provides me with useful materials and resources that saves me time and effort!

EQIPD keeps me abreast of the changes in rules and regulations in the non-regulated space set by health authorities, funders, publishers and collaboration partners and helps me ensure continuous improvement in our quality standards.

If I have to perform an assessment, EQIPD helps me to identify critical points to discuss and suggest potential improvements.

Anja Gilis, Janssen
